Nominate Palo Alto

Editor,

Google is looking for a few good cities in which to build a fierce-fast open fiber network as a test bed. The community must be welcoming, have the capability of significant innovation, and see that things are done fast and right, from the start.

Palo Alto is a good candidate for Google. To make ourselves a great candidate requires a broad community uprising to "Nominate Palo Alto" by March 26.

iPaloAlto.com, a local website that has been reporting on Palo Alto open fiber for several years, makes it easy. Or you can go directly to the Google Nominate Palo Alto site google.com/appserve/fiberrfi/public/options

Your answer to Google Question 6 may be as simple as, "Palo Alto is perfect for Google Open Fiber."

When you click "Nominate Palo Alto," you are participating in "Palo Alto civic engagement" for a shot at landing \$50 million worth of community infrastructure and all the benefits that go with it. When you study it closely, as I have, deciding to support Palo Alto for Google Open Fiber becomes the biggest no-brainer in history.

Bob Harrington
Adviser to the Mayor — Broadband
Fulton Street, Palo Alto
